Complete the answers to the questions.

1. Why is Kilimanjaro's snow melting so quickly?

Because the mountain is in a tropical region and because of one type of climate change called Global warming. Deforestation is another possible reason.

2. What problems would the loss of Kilimanjaro's glaciers cause?

It would remove an important source of water for the people who live on or near the mountain. It could also probably reduce the number of tourists that come to Tanzania.

3. What do the missing snows of Mount Kilimanjaro show people all over the world?

- They definitely show people all over the world the dangers of climate change and deforestation.

Read the sentences and mark T(true) or F(false) for each sentence. Correct the false sentences.

1. T Being in a tropical region puts Kilimanjaro's ice caps at risk.
2. T Global warming is a type of climate change.
3. F Cooler temperatures result from deforestation.
4. T Cutting down trees leads to less rain and snow.
5. F Kilimanjaro's glaciers are melting very slowly.
